Customer Support & Service Policy — Sample Knowledge Base

Important: This is fictional sample content created for testing your AI Customer Support Agent. It is not the policy of a real company. Replace these details with your business's approved policies before production use.

1. Customer Support Hours

• Our demo customer support team is available Monday to Saturday, from 9:00 AM to 6:00 PM (IST).

• Support is unavailable on Sundays and public holidays. Messages received outside support hours may be answered on the next working day.

2. Order Tracking

• Customers can track an order using the tracking ID shared through their registered email address or phone number.

• If a tracking link or tracking ID has not arrived within 24 hours after shipment confirmation, the customer should contact support with the order number.

• The support agent must not invent a tracking ID or claim that an order has shipped without verified order information.

3. Delivery Estimates

• The sample standard delivery estimate is 3–5 business days after shipment.

• Delivery estimates are indicative and may vary due to the delivery location, courier operations, weather, or other unexpected circumstances.

• The AI agent must not promise an exact delivery date unless it has access to verified order-tracking data.

4. Order Cancellation

• A customer may request cancellation before the order is shipped.

• Once an order has been shipped, cancellation may no longer be available. The customer should contact a human support representative for available options.

• The AI agent must not state that an order has been cancelled unless the cancellation is confirmed by the order system.

5. Returns and Refunds

• For this sample policy, a refund request may be raised within 7 calendar days of receiving the product, subject to product eligibility and inspection.

• The customer should provide the order number, reason for the request, and relevant photographs if the item is damaged or incorrect.

• Refund approval is not automatic. The support team must review the request against the applicable policy.

• The AI agent must not guarantee refund approval or a refund processing date without verified information.

6. Accepted Payment Methods

• The demo store accepts UPI, debit cards, credit cards, and net banking.

• The AI agent must never ask customers to share their UPI PIN, card PIN, CVV, password, or one-time password (OTP).

7. Contacting Support

• Customers can contact support through the customer support chatbot or the business's verified support email address.

• Sample email for development only: support@example.com. Replace this placeholder before using the project with real customers.

• For account-specific, payment-related, or order-specific information, the agent should collect only the minimum necessary details and use an approved secure system.

8. Human Escalation

• Escalate to a human support representative when the customer requests a human, remains dissatisfied after the agent's response, reports suspected fraud or a security issue, or raises a sensitive or exceptional case.

• Escalate when the answer is not available in the knowledge base or requires access to private order, payment, or account records.

• The AI agent should acknowledge the issue, explain that human assistance is needed, and avoid claiming that a ticket has been created unless the ticket system confirms it.

9. Privacy and Safe Handling

• Do not request or store passwords, OTPs, PINs, full payment-card details, or other unnecessary sensitive information.

• Do not disclose one customer's personal or order information to another customer.

• Use synthetic customer data while developing and testing this project.
